Geared motors with worm and wheel - IMfinity®

Multibloc

Construction Description

Multibloc worm and wheel geared motors are used to adapt the speed of the electric motor to that of the driven machine.

Therefore, they are determined by the motor power (P) expressed in kilowatts (kW) and the output rotation speed of the gearbox (N_S) in revolutions per minute (min^{-1}).

The main characteristic of the gearboxes is the rated output torque (M_{nS}) expressed in Newton-metres (N.m):

$$M_{nS} = \frac{P \times 9550}{N_S} \times \text{efficiency}$$

A range of seven sizes: 41, 31, 22, 23, 24, 25, 26.

Rated output torque: 20 N.m to 1500 Nm.

Power rating : from 0.06 to 9 kW.

Reduction ratios: from 5.2 to 2630.

High efficiency: 55 % to 88 %.

Very silent operation.

Name	Material	Observation
Housing	Aluminium Cast iron	<p>Mb 41: pressure die-cast aluminium, heavily ribbed to improve mechanical strength and heat dissipation</p> <ul style="list-style-type: none"> - use of single-component pearlitic FGL-150 cast iron (flake graphite: 150 MPa on breaking) Mb 31, Mb 22, Mb 23 and ENGJL cast iron (flake graphite: 200 MPa tensile strength) Mb 24 to Mb 26 single component perlite to ensure the complete sealing - monobloc with reinforced internal ribbing to absorb vibrations and noise and to increase rigidity - with NU housing, it becomes versatile by the adaptation of: <ul style="list-style-type: none"> * R torque arm kit, * S baseplate (Mb 31 excepted), * BS BD or BN flanges. Multibloc: Mb/AP

Selection method

SELECTING AN INPUT SHAFT GEARBOX (AP)

The following must be known:

- M_S : the output torque required for the application or the input power,
- N_E et N_S : the input and output speeds (in RPM) required for the application,
- the form: plain housing NU, baseplate NS, torque arm R, flanges BS, BD, BN, and the operating position, see pages 8 to 13.

1- Selecting the gearbox

a - Calculation of the duty factor K required for the application; refer to page 41 of the Electromechanical Manual reference 5181.

$$K = K_1 \times K_2$$

b - Calculate the reduction i :

$$i = N_E / N_S$$

c - Calculate:

- the equivalent torque M_{eq} :

$$M_{eq} = M_S \times K$$

where M_S is the output torque (in N.m), K the duty factor,

- or the equivalent power P_{eq} :

$$P_{eq} = P \times K$$

where P is the input power (in kW).

d - Refer to the selection table for 4-pole input speed, page 16; each case of the table gives for each gearbox size:

- η : efficiency,
- P_{nE} : maximum input power for $K = 1$ (duty factor = 1),
- M_{nS} : rated output torque for $K = 1$ (duty factor = 1),
- i : exact reduction.

e - Select the gearbox, in the table corresponding to the input speed N_E , which has an equal or higher torque than the selection torque M_S .

2 - verification of the maximum permissible torque M_{Max}

While applying with factor $K < 0.7$, check that the maximum permissible torque is not exceeded as given below.

$$M_{Max} \geq M_S$$

i_{aR}	Maximum permissible torque for Multibloc				
	Mb 26	Mb 25	Mb 24	Mb 23	Mb 22
5.2	-	-	-	360	-
7.3	1800	950	530	360	220
10	1800	950	560	360	220
11.5	-	-	350	200	-
15	1900	950	500	300	200
20	1400	950	500	320	200
25	1500	850	450	300	170
30	1400	900	450	300	170
40	1600	850	450	300	170
50	1500	800	400	300	150
60	1400	760	400	250	150
80	1500	800	400	250	150
100	1300	700	360	250	150

3 - Verification of the thermal power

For the operating factors $FM > 40\%$, according to the ambient temperature θ , check that the working input power for application P_{uE} for the selected gearbox is less than the rated thermal power P_t , given below for N_E 1430 at an ambient temperature of 20°C. It is a function of the input power that heats the gearbox up to the maximum temperature acceptable by the seals (100°C in oil bath).

i_{aR}	Rated thermal power Multibloc				
	Mb 26	Mb 25	Mb 24	Mb 23	Mb 22
5.2	-	-	-	1.98	-
7.3	8.07	4.85	2.67	1.74	1.33
10	7.06	4.21	2.33	1.53	1.19
11.5	-	-	-	1.38	1.11
15	5.76	3.35	1.91	1.21	0.99
20	5.23	3.05	1.73	1.12	0.90
25	4.81	2.76	1.52	1.00	0.76
30	4.34	2.29	1.25	0.79	0.65
40	3.47	2.02	1.12	0.74	0.55
50	3.18	1.82	1.01	0.66	0.51
60	2.90	1.70	0.92	0.57	0.47
80	2.47	1.44	0.80	0.53	0.43
100	2.18	1.31	0.73	0.48	0.39

If this is not the case, then choose a larger-size gearbox.

$$P_{uE} \leq P_t$$

Refer to page 52 of the Electromechanical Manual reference 5181 for 2 and 6 pole N_E (or consult us).

4- Radial and/or axial force check

For the gearboxes driving the load through other means than a semi-elastic coupling, check that the radial force F_R and/or the axial force F_A permissible on the output shaft of the gearbox is equal to or higher than that required for the application. Refer to the tables on pages 43 to 50 of the Electromechanical Manual reference 5181. If this is not the case, then restart the selection using a larger-size device.

5- Operating positions

See pages 8 to 13.

6- Choosing the options

Refer to the "Equipment and options" chapter for the choice of any standardised accessories (p. 75).

7- Commissioning

For commissioning, storage and precautions for use, see page 81.

Example of selection

Motorisation of a belt conveyor:

- N_E : 1430 RPM,

- N_S : 135 RPM,

- M_S : 125 N.m

Operation: 16 hours/day (medium overloads) and 1 start per day.

Ambient temperature θ : 15°C.

Form: foot mounted.

Operating position: feet on floor, horizontal input shaft. Left, solid, output shaft. No radial or axial force.

1 - Selecting the gearbox

a - Calculation of the duty factor K used in the application:

$$K = K_1 \times K_2$$

K_1 is a function of FJ and FM ; in this case the type of operation is with medium overloads $FJ \leq 3$ with application class II.

$$K_1 = 1.42$$

$$K_2 = 1.25 (\text{FM } 100\%)$$

$$K = 1.42 \times 1.25 = 1.77$$

b - Calculation of the reduction i :

$$i = N_E / N_S$$

$$i = 1450 / 135 = 10.53$$

c - Calculation of the output torque M_{eq} :

$$M_{eq} = M_S \times K$$

$$M_{eq} = 125 \times 1.77 = 221 \text{ N.m}$$

Refer to page 16 of the table corresponding to the input speed higher than or equal to N_E (4 p); select the gearbox that has a torque equal to or higher than the output torque M_S .

$$M_{nS} \geq M_{eq}$$

d - Type of gearbox selected:

2401: i

$$P_{nE} = 4.29 \text{ kW } \eta = 0.86$$

$$\text{i.e. } P_{uE} = M_{nS} \times n_{uS} / 9.55 \times \eta$$

$$\text{i.e. } P_{uE} = 2055 \text{ W} = 2.055 \text{ kW}$$

2 - Verification of the maximum torque M_{Max} :

see table below.

$$M_{Max} \geq M_{eq} : 560 \text{ N.m} \geq 221 \text{ N.m}$$

3 - Verification of the thermal power P_t (preceding §3)

$$P_t = 2.33 \times 1.15 = 2.68 \text{ kW}$$

where $K\theta = 1.15$ $P_{uE} = 2.055 \text{ kW}$

$$P_t > P_{uE}$$

so the gearbox selected is suitable.

4 - Form and operating position, pages 8-9: NSD L B3

Multibloc

Multibloc: Mb / LS, LSES motors - 4 poles

Selection method

SELECTING A GEARED MOTOR

The following must be known:

- P_{uE} : working input power necessary for the application. It will be calculated by taking an average gearbox efficiency of 80%.
- N_E and N_S : input and output speeds (in RPM) required for the application.
- h/d: operating time in hours per day.
- FM: operating factor (%)
- Z: number of starts per hour (d/h).
- The form: plain housing NU, baseplate NS, torque arm R, flanges BS, BD, BN, and the operating position, see pages 8 to 13.

1 - Choice of the type of motor or brake motor (pages 21 to 43)

2 - Selecting the geared motor

a - Calculation of the duty factor K required for the application; refer to page 41 of the Electromechanical Manual reference 5181. $K = K_1 \times K_2$

b - Refer to the selection tables for power higher than or equal to P_{uE} .

The following selection tables on pages 21 to 43 are organised:

- by increasing powers for output speeds of 1 to more than 275 min⁻¹.
- by increasing Kp, by reduction index section.

c - Search in the table the required output speed N_S corresponding to the power.

d - Select the geared motor having the maximum possible duty factor, equal to or higher than that required for the application: $K_p \geq K$

e - Check the useful input power by taking the actual efficiency of the gearbox in the selection table.

Verify that this does not change the type of motor, if yes: repeat the selection with the new working input power; identify the type of (brake) motor corresponding to the selected useful power.

When using variable speed with separate drive, the input speed of the gearbox must not exceed 1500 min⁻¹; consult us.

3 - Verification of the permissible torque M_{Max}

While applying with factor $K < 0.8$, check that the maximum permissible torque is not exceeded as given below.

$$M_{Max} \geq M_S$$

i_{aR}	Maximum permissible torque for Multibloc					
	Mb 26	Mb 25	Mb 24	Mb 23	Mb 22	Mb 31
5.2	-	-	-	360	-	-
7.3	1800	950	530	360	220	150
10	1800	950	560	360	220	150
11.5	-	-	-	350	200	140
15	1900	950	500	300	200	140

20	1400	950	500	320	200	140
25	1500	850	450	300	170	110
30	1400	900	450	300	170	110
40	1600	850	450	300	170	110
50	1500	800	400	300	150	100
60	1400	760	400	250	150	100
80	1500	800	400	250	150	90
100	1300	700	360	250	150	90

4 - Verification of the thermal power

For the operating factors FM > 40%, according to the ambient temperature θ , check that the rated thermal power P_t of the selected gearbox is higher than the useful input thermal power P_{uE} given below for N_E 1430 at the ambient temperature of 20°C. It is a function of the input power that heats the gearbox up to the maximum temperature acceptable by the seals (100°C in oil bath).

i_{aR}	Rated thermal power Multibloc					
	Mb 26	Mb 25	Mb 24	Mb 23	Mb 22	Mb 31
5.2	-	-	-	1.98	-	-
7.3	8.07	4.85	2.67	1.74	1.33	1.46
10	7.06	4.21	2.33	1.53	1.19	1.22
11.5	-	-	-	1.38	1.11	1.05
15	5.76	3.35	1.91	1.21	0.99	0.92
20	5.23	3.05	1.73	1.12	0.90	0.82
25	4.81	2.76	1.52	1.00	0.76	0.70
30	4.34	2.29	1.25	0.79	0.65	0.57
40	3.47	2.02	1.12	0.74	0.55	0.48
50	3.18	1.82	1.01	0.66	0.51	0.44
60	2.90	1.70	0.92	0.57	0.47	0.40
80	2.47	1.44	0.80	0.53	0.43	0.35
100	2.18	1.31	0.73	0.48	0.39	0.32

If this is not the case, then choose a larger-size gearbox. $P_{uE} \leq P_t$

Refer to page 52 of the Electromechanical Manual reference 5181 for 2 and 6 pole N_E (or consult us).

5 - Radial and/or axial force check

For the gearboxes driving the load through other means than a semi-elastic coupling, check that the radial force F_R and/or the axial force F_A permissible on the output shaft of the gearbox is equal to or higher than that required for the application. By direct reading in the tables on pages 21 to 43 for the standard output shafts HL or HR. If this is not the case, refer to the tables on pages 45 to 50 of the Electromechanical Manual reference 5181; if required, restart the selection using a larger unit.

6 - Operating positions

See pages 9, 11, 13.

7 - Choosing the options

Refer to the "Equipment and options" chapter for the choice of any standardised accessories (p. 75).

8 - Commissioning

For commissioning, storage and precautions for use, see page 81.

Example of selection

Hollow shaft drive of a conveyor:

$$- P_{uE} : 0.77 \text{ kW},$$

$$- \eta : 0.8$$

$$- N_S : 34 \text{ min}^{-1},$$

Operation: 8 hours/day (medium overloads) and 200 starts per hour, FM 45%.

Moment of inertia of the motor load:

$$J_{c/m} = 0.0226 \text{ kg.m}^2$$

Ambient temperature q: 30°C.

BS standard flange form

Operating position: vertical shaft, flange on the left on the floor, brake motor.

1 - Choice of the brake motor type:

$$P \geq P_{uE}, \text{i.e. } P = 0.9 \text{ kW}$$

non-IE FFB type brake motor

2 - Selecting the geared motor:

a - Calculation of the duty factor K used in the application:

$$FJ = J_{c/m} / J_m = 0.0226 / 0.00266 = 8.50, \text{i.e. application class III}$$

K1 = 1.28 (class III, 200 starts/hour, 8 hours/day)

$$K2 = 0.95 (\text{FM 45\%})$$

$$K = K1 \times K2$$

$$K = 1.28 \times 0.95 = 1.22$$

b - Search in the selection tables on page 32, 33: 0.9 kW > P_{uE}

c - Search the output speed N_S of the geared motor closest to 34 min⁻¹: 36.3 min⁻¹ is suitable.

d - Duty factor Kp > 1.22: 1.74 is suitable.

e - The actual efficiency of the selected gearbox is 0.69. Thus the working input power is actually: 0.77 x 0.8 / 0.69 = 0.89 kW

The 0.9 kW motor is suitable

f - The selected gearbox type page 33 Mb 2401:

$$i = 40$$

$$M = 156 \text{ N.m}$$

$$Kp = 1.74$$

$$F_R \text{ at EB/2} = 6420 \text{ N}$$

(extract in next page)

3 - Verification of the maximum torque M_{Max} :

not necessary because K = 1.22.

4 - Verification of the thermal power P_t : see §4 opposite (or page 52 of the Electromechanical Manual reference 5181)

$$P_t = 1.12 \times 0.85 \text{ with } K\theta = 0.85 \text{ (for } 30^\circ\text{C ambient)}$$

$$P_t = 0.95 \text{ kW}$$

$P_{uE} \leq P_t$, so the selected gearbox is suitable.

5 - Verification of radial forces F_R and/or axial forces F_A if necessary

6- Form and operating position, pages 10-11 : BSL H V1

a - Terminal box position UP-270 (non-std)

b - gearbox input type, page 74: flange type B14 IEC std FT = 100 ba 19 x 40

Dimensions p.53

Geared motors with worm and wheel - IMfinity®

Multibloc

Multibloc: Mb / LS, LSES motors - 4 poles

Selection method

SELECTING A FIXED SPEED GEARED MOTOR

- Search the selection tables corresponding to $P_{uE} = 0.9 \text{ kW}$ (page 33).
- Search the output speed N_S of the geared motor closest to 34 min^{-1} at 50 Hz.
- Select the geared motor with a duty factor above that required by the application.
- ---> Selection of the geared motor **Mb 2401 i = 40 BSL H V1 MUT 4P LS 80 L 0,9 kW IFT/NIE FFB1 12 N.m**

M = 100*/85* : Flange with through holes

Mb dimensions

Equipment and options

In the case of pendular mounting, LEROY-SOMER proposes a torque arm R which is fastened on the lateral face, either left R L or right R R for Mb 4101, Mb 3101, Mb 2201 to 2501 Mb.

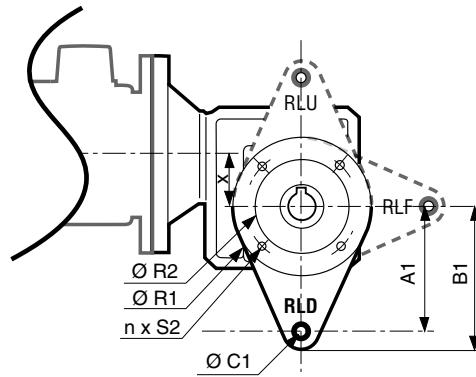

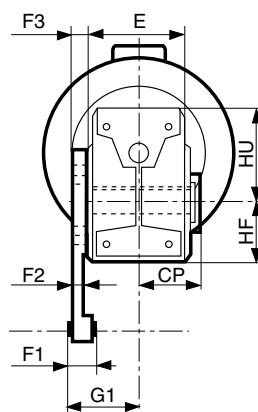

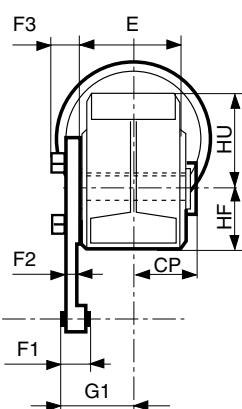

In standard version, the torque arm (fitted with a flexible Silentbloc shock mount) is supplied separately, and painted in black R K (except unpainted Mb 4101).

Optionally, the torque arm is supplied mounted on the gearbox: in this case specify R (right) or L (left) mounting side and D, F or U orientation.

The torque arm can be face down R L D, front R L F or up R L U.

R LD* form

* or R LF, or R LU

Geared motors with worm and wheel - IMfinity®

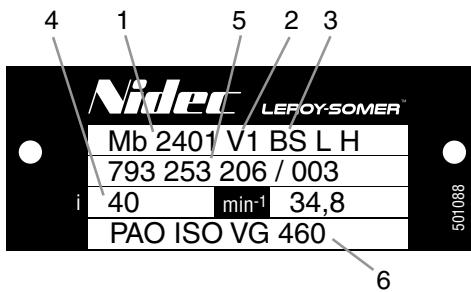

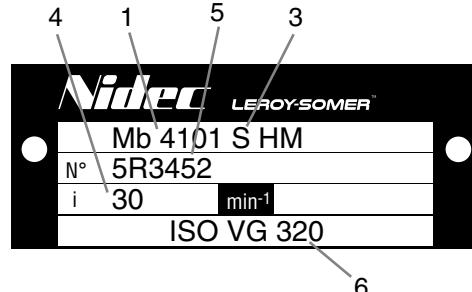

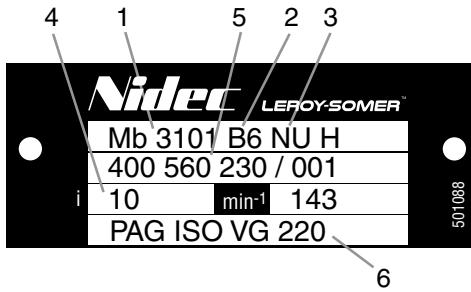

Multibloc

Identification Gearboxes

NAMEPLATES

The nameplate identifies the motors, indicate the main performance and show compatibility of the motor concerned with the main standards and concerning them.

Examples:

Information to be mentioned in each spare parts order:

① Mb: Multibloc gearbox 3101: gearbox type	② B6: operating position	③ NU: fixing form H: output shaft form	④ i: exact reduction	⑤ No.: serial number N/ 001: order number in the series	⑥ PG, PAG or PAO ISO VG: lubrication according to ISO 320, 220: viscosity grade at 40°C in cSt or 460 Option : lubrication synthetic oil USDA H1 PAO H1 ISO VG 460 (Mb 4101 excluded)	min ⁻¹ : number of revolutions per minute
--	-----------------------------	--	-------------------------	--	--	--

SPECIFIC MARKING (for Mb 3101, Mb 22 to 26)

INERIS no. 03 ATEX 0013X: Geared motor
INERIS no. 03 ATEX 3005X: Gearbox

Legal mark of compliance of the equipment according to the requirements of European Directives

Special marking (ATEX)

- 0080 : Identification of INERIS (Notified Body)
 : Specific marking
II 2D : Group II, category 2, Conductive dusts or:
II 3D : Group II, category 3, non-conductive dusts
c : Meshing point protection
T max : Maximum surface temperature: e.g. 125°C
T lub: lubricant : Temperature recorded during plant tests (ambient temperature 20 °C)
Certificate no. : No. of the CE type certificate issued by INERIS (group II 2D)
Possibly: additional marking provided for in the EC certificate

Mains supply plate

Drive supply plate

* Valid only for 2 & 4 pole motors except 2P 3 kW and 4P 2.2 kW.

Aluminium 6P motors all powers and 2P 3 kW and 4P 2.2 kW are available in CSAe, ee, cCSAus, NEMA Premium version as options upon specific request.

Plate values provided for information only

Identification**LSES motor - Aluminium housing**

The nameplate identifies the motors, indicate the main performance and show compatibility of the motor concerned with the main standards and concerning them.

**Definition of symbols on
nameplates****Mains supply plate:**

MOT 3 ~	: Three-phase A.C. motor
LSES	: Series
112	: Frame size
MU	: Housing description
T	: Impregnation index

Motor no.

123456	: Motor serial number
N	: Month of production
14	: Year of production
001	: Order no. in the series
IE2	: Efficiency class
86.6%	: Efficiency at 4/4 load

IP55 IK08	: Degree of protection
I cl. F	: Insulation class F
Ta 40°C	: Contractual ambient temperature
S1	: Duty - Duty (operating) factor
kg	: Weight
V	: Supply voltage
Hz	: Supply frequency
min⁻¹	: Revolutions per minute
kW	: Rated output power
cos φ	: Power factor
A	: Rated current
Δ	: Delta connection
Y	: Star connection

Bearings

DE	: Drive end bearing
NDE	: Non drive end bearing
g	: Amount of grease at each greasing (in g)
h	: Lubrication interval (hours)

POLYREX EM103: Type of grease

	: Vibration level
	: Balancing mode

**Please quote when ordering
spare parts**

Drive supply plate:

Inverter settings	: Values necessary to set the frequency inverter
Motor performance	: Torque available on the motor shaft in % rated torque at the plate frequencies
Min. Fsw (kHz)	: Minimum cut-off frequency acceptable for the motor
Nmax (min⁻¹)	: Maximum mechanical speed acceptable for the motor

Plate values provided for information only

Geared motors with worm and wheel - IMfinity®

Multibloc

Identification

FFB Brake motors

NAMEPLATES

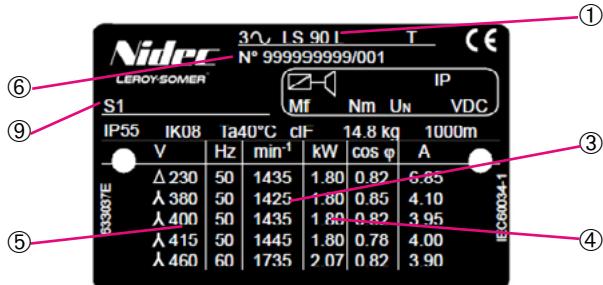

Check that the equipment conforms to the order: mounting arrangement, information on the nameplate.

Information ① to ⑪ should be quoted when ordering spare parts.

Other logos can optionally be provided: agreement prior to ordering is essential.

Example: LS 90 L IFT/NIE

MOTOR NAMEPLATE

Definition of symbols

T: Impregnation class

NIE or IE3: Efficiency class

IP-- IK--: Protection index*

CI.F: Insulation class

(Ta) 40°C: contractual ambient operating temperature

cos P or φ: power factor

A: Rated current

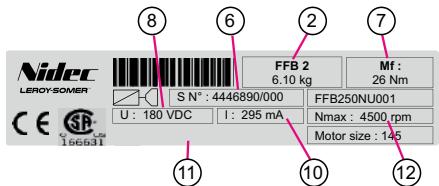

Δ: delta connection

λ: Star connection

: Vibration level

: Balancing mode

BRAKE NAMEPLATE

Essential information included on the nameplates:

①	Motor series, frame size
②	FFB brake type
③	Speed of rotation (RPM⁻¹)
④	Rated power (kW)
⑤	Motor voltage (V)
⑥	Motor and brake manufacturing no.
⑦	Mf: Braking torque (N.m)
⑧	U: Brake coil voltage (VDC)
⑨	Duty - Duty (operating) factor
⑩	I: Coil current (mA)
⑪	Special marking (ATEX)
⑫	rpm: Maximum usage speed

Please quote when ordering spare parts

Bearings

DE: Drive end bearing

NDE: Non drive end bearing

Marking

Definition of symbols used on nameplates:

: Legal mark of conformity of product to the requirements of European Directives

: Product certified CSA, conforming to UL

*IK: Shock resistance

The motor can withstand a weak mechanical shock (IK 08 according to EN 50102). **The user must provide additional protection if there is a risk of significant mechanical shock.**

Installation

ACCEPTANCE

Check the equipment's condition. In case of damage whether on it or its packaging, make reservations with the carrier (if applicable, overhauling shall be handled within the guarantee).

Check that the equipment conforms to the order (mounting arrangement, information on the nameplates).

See manual 2557

MATERIALS HANDLING

- When the equipment is fitted with lifting rings, these are planned for lifting it only.

Allow sufficient room around the geared motor for plugs accessibility:

- standard G1/8" plug for Mb 22 to 25,
- G3/8" plug for Mb 26,
- no plug for Mb 4101, 3101 which are lubricated for life.

LUBRICATION

For operating between -20°C and +40°C, the Multibloc gearbox is supplied, as standard, lubricated with a synthetic oil of the type:

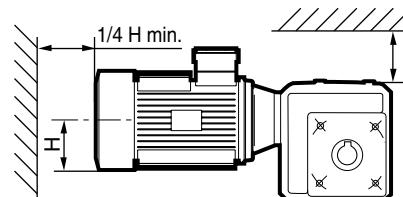

- for **Mb 4101**: PG (polyglycol) ISO VG 320 (AGIP TELIUM VSF),
- for **Mb 3101**: PAG (Polyalkylene Glycol) ISO VG 220 (Shell OMALA S4WE 220, approved by our technical services),
- for **Mb 2201 to Mb 2601**: PAO (Poly Alpha Olefin) ISO VG 460.

STORAGE

Store the equipment in a clean, dry location, protected from shocks, vibrations, variations in temperature (included between -30°C and +50°C) and in an environment with relative humidity of less than 80%.

Extended storage (> 1 year)

- Fill the gearbox fully with oil (upon start up, change the oil and top up as indicated in the manual of the gearbox concerned) except if the equipment is lubricated for life. Coat the external seal(s) with grease.
- Enclose the unit in a sealed plastic envelope (e.g. thermogluing) with desiccant bag inside.
- For brake geared motors with manual release, unlock the brake to avoid sticking.

You must use an oil of the recommended type.

Polyglycol lubricants cannot be mixed with mineral or synthetic lubricants of a different type.

A maintenance fault may cause material or bodily damage. Check regularly that the recommendations concerning mechanical and electrical installation are still complied with.

COMMISSIONING

Installation must be performed by qualified personnel.

- Mount the gearboxes onto rigid and flat supports free of vibration. Use screws of sufficient length and quality class (class 8.8 min) and tighten them at 70 % their elastic limit.
- Remove the protections from the shaft(s) and flange(s): plastic end pieces, oil or varnish (if necessary, use a solvent while avoiding any contact with the seals).
- For gearboxes lubricated with oil, check or top up the oil level.
- Fit the breather cap at the high point of the gearbox, when the equipment features one.
- Lubrication: refer to the appropriate manuals (page 2).

Options

For a duty factor $K \geq 1$ and operation between:

- -30°C and -10°C:
synthetic oil ISO VG 150
(max. T° of oil: 90°C continuously),
- -50°C and -30°C:
synthetic oil ISO VG 32
(max. T° of oil: 40°C continuously).

For use in the agro-food industry, we deliver gearboxes (Mb 3101, Mb 22 to Mb 26) in accordance with the Machinery Directive 89/392/EEC and meeting the requirements of the USDA (United States Department of Agriculture) with option PAO H1 ISO VG 460: lubricant that can come into accidental contact with food.

80	1,100 x 950 x 1,180	1,020 x 870 x 1,000

¹ maximum permissible weight : 50 kg

² these approximate values are given for individual packages. Packages grouped in open slat crates for quantity of machines supplied > 5, in the majority of cases.

Configurator

The configurator is a powerful tool to help in the selection of motors or gearboxes associated with variable speed drives. The continued evolution of this software is an important further step in case of the motors and geared motors IMfinity®, providing the user the option to associate with the drive the motor which he selects.

Our motors, geared motors and drives associated with this advanced tool ensure you the best combination of products during the selection for your applications.

You can also benefit because of a very short time to do this, contact your Automation Centre to see whether your country is covered by the offer *Express Availability* or by Express transport in 24 hours.

MAINTENANCE

The scheduled maintenance of your facilities ensures continuity of your production flow and extends equipment lifetime, while ensuring a good return on investment.

In case of emergency, we offer services ensuring you have the solution allowing your facilities to be restarted in the shortest possible time.

We believe maintenance relies on experts close to your facilities, available 24/7, monitoring your equipment's operation, knowing how to define the level of intervention required according to the context, and able to intervene urgently.

Unique services and assistance

- Proximity network with 200 service partners
- 24 hours Express Transport option

To verify if the 24h Express transport option is available for your country, please contact your local Automation Center.

MONITORING CONTRACTS

Maintaining drive systems in operating condition at all times is vital for proper operation of your equipment, whether on line production units or utilities.

Settings monitoring programs allow detecting any drift and anomalies, often causing malfunctions.

MAINTENANCE CONTRACTS

Observing checking intervals and changing first wear devices and parts are operations which are often complex and tedious due to the many pieces of equipment present in an industrial site.

To facilitate these operations, our solutions allow managing maintenance of the drives.

EXPRESS AVAILABILITY COMMITMENT

- Ready to ship in 1 to 10 working days
- Motors, servo motors, geared motors, drives, options and accessories
- Limited quantity
- Access to the list of eligible products for Express availability, and the corresponding conditions, directly on our website

Express Availability

Being able both to respond to urgent requests and adhere to promised customer lead times calls for a powerful logistics system.

The availability of geared motors is ensured by the network of approved partners and Leroy-Somer central services all working together.

The selection data in the offer "Express Availability Drive systems" use a colour code to specify the product delivery time for each family, according to the quantities ordered.

Consult Leroy-Somer.

The illustration of the delivery time below for the equipment selected page 18, i.e. D+5; D being the day the order is received by the factory before 12:00 am.

FMD - FFB - IFT/NIE brakes geared motors (outside efficiency class) MULTIBLOC wheel and screw Current environment - fixed speed

Universal mounting	MUF
Input shaft mounting	AP

PROVISIONING TIME FOR EX-FACTORY (FRANCE), ON WORKING DAYS

Orders received at the factory on the day J before noon, the Central European Time, within the limits of maximum quantity, will follow the times of provision indicated below.

For orders of products with options, the provisioning time is that of the longest time of the product or its options.

If the order is received after noon, provisioning time is increased by one working day.

The maximum quantity is defined per order line. For above the max. quantity, please consult your commercial agency.
