The CPU & Power Module (CPM) contains the power supply unit for intrinsically safe supply of power to the I/O modules and field circuits.

The CPM has the function of a gateway between the internal bus in an IS1 field station and the fieldbus that connects the field station to the automation system.

System redundancy is supported for Profibus conformable masters and also other masters (so called flying masters). As an alternative media redundancy can be used.

The interface of the CPU & Power Module with the internal data bus and the I/O modules is designed with redundancy.
